

NEXX
Retail ERP
CASE STUDY

ONE VASCO

Increases data security, efficiency and agility to scale business operations gaining a competitive edge using NEXX ERP from CompuLynx.

Introduction

One Vasco specializes in simplifying the matrix of contemporary global travel through seamless value innovation. The avant-garde enterprise offers a comprehensive bouquet of travel-related services to global travelers with an end-to-end view. With a global footprint across 35 countries, the services offered by One Vasco range from travel facilitation such as hotel and airline booking, transportation and destination management, visa application support to best-of-breed telecommunication and travel retail products.

One Vasco migrated to NEXX ERP in March 2020.

The Challenge

Before using NEXX ERP, One Vasco had been using CompuLynx's previous generation retail solution, namely CORE, for its retail operations. CORE was designed and deployed on the older Client Server technology and has served the business requirements of over 400 retailers across the globe, including One Vasco who have been using CORE since year 2015.

Globally, technology advancements have prompted software developers and users to reinvent their product architectures and deployment models. CompuLynx is no exception to this pressure, as the urge came from its most advanced and forward looking customers. To this end, One Vasco challenged CompuLynx to migrate its platform from Client-Server to the Cloud. CompuLynx took up the challenge and took on the task of redesigning and re-engineering its Retail Suite on the cloud architecture which gave birth to NEXX ERP, which is now offered on SaaS Model, by CompuLynx to its customers.

The Approach

CompuLynx was tasked with customizing and replacing of One Vasco's old system to NEXX ERP which was deployed at 120 locations in a record time of under 90 days. "This was a major project for us as it entailed completely overhauling the IT systems for our retail operations whilst ensuring migration happens with minimum, if not zero, disruption to our business and service to our customers," explains Mr Jaishankar, VP of Projects at One Vasco.

"Both One Vasco and CompuLynx teams meticulously planned the migration with attention to utmost detail and the end result was that we migrated without business disruption," he adds.

The implemented modules of NEXX ERP include Merchandising, Inventory, POS and custom reporting for sales and purchases. "Departments from multi-locations can use the ERP as it was deployed using the hosted model."

"90 Days

No of days taken to deploy NEXX ERP for One Vasco in 120 Locations across the globe."

The Results:

With NEXX cloud-based Retail ERP, One Vasco's retail operations, warehouse and distribution management, and financials in 120 locations in over 30 countries across the globe will work coherently as one integrated solution for the business.

One Vasco can now manage inventory of all branches from a single centralized place, as well as track slow and fast moving items across branches using NEXX POS solution. In addition, there is improved decision making through achievement of data integrity and real-time reporting.

CompuLynx NEXX ERP has also improved monitoring, managing, and controlling of data and offered optimized production control by facilitating efficiency in transactions processing including: cash sales, credit sales, credit cards sales, refunds thereby increasing profitability.

Overall One Vasco will significantly reduce its cost of managing and maintaining IT systems, increase data security, efficiency and agility to scale business operations as a competitive advantage using NEXX ERP.
